

# Course 1: Linear Algebra for Machine Learning & Data Science

## Overview

Trần Đức Mạnh

Ngày 4 tháng 2 năm 2023

## Mục lục

<b>1</b>	<b>System of linear equations: 2 variables</b>	<b>2</b>
1.1	System of sentences . . . . .	2
1.1.1	What is a system of sentences? . . . . .	2
1.1.2	New concepts . . . . .	2
1.2	System of equations . . . . .	2
1.2.1	From sentences to equations . . . . .	2
1.2.2	Systems of equations . . . . .	2
1.2.3	What is a linear equation? . . . . .	3
1.3	System of equations as lines . . . . .	3
<b>2</b>	<b>System of linear equations: 3 variables</b>	<b>4</b>

# 1 System of linear equations: 2 variables

## 1.1 System of sentences

### 1.1.1 What is a system of sentences?

- A system of sentences is just a group of sentences
- Example 1: A system of 2 sentences

System 1	System 2	System 3
The dog is <b>Black</b>	The dog is <b>Black</b>	The dog is <b>Black</b>
The cat is <b>Orange</b>	The dog is <b>Black</b>	The dog is <b>White</b>

- Example 2: A system of 3 sentences

System 1	System 2	System 3	System 4
The dog is <b>Black</b>	The dog is <b>Black</b>	The dog is <b>Black</b>	The dog is <b>Black</b>
The cat is <b>Orange</b>	The dog is <b>Black</b>	The dog is <b>Black</b>	The dog is <b>White</b>
The bird is <b>Red</b>	The bird is <b>Red</b>	The dog is <b>Black</b>	The bird is <b>Red</b>

### 1.1.2 New concepts

#### 1. Complete, Redundant, Contradictory

- **Complete:** when *number of pieces of information = number of sentences*  
Example: Ex1 - System 1, Ex2 - System 1
- **Redundant:** when there are same sentences  
Example: Ex1 - System 2, Ex2 - System 2, Ex2 - System 3
- **Contradictory:** when there are sentences contradict each other  
Example: Ex1 - System 3, Ex2 - System 4

#### 2. Singular & non-Singular

- **Singular:** when the system is Complete
- **non-Singular:** when the system is not Complete

## 1.2 System of equations

### 1.2.1 From sentences to equations

Sentences	Sentences with numbers	Equations
The dog is black	The price of an apple and a banana is \$10	$a + b = 10$

### 1.2.2 Systems of equations

System 1	System 2	System 3
$a + b = 10$ $a + 2b = 12$	$a + b = 10$ $2a + 2b = 20$	$a + b = 10$ $2a + 2b = 24$
<b>Unique Solution</b>	<b>Infinite solutions</b>	<b>No solution</b>
$a = 8$ $b = 2$	$a = 8, 7, 6, \dots$ $b = 2, 3, 4, \dots$	
<b>Complete</b>	<b>Redundant</b>	<b>Contradictory</b>
<i>Non-singular</i>	<i>Singular</i>	<i>Singular</i>

### 1.2.3 What is a linear equation?

Linear	non-Linear
$a + b = 10$	$a^2 + b^2 = 20$
$3.4a - 48.99b + 2c = 122.5$	$ab^2 + \frac{b}{a} - \frac{3}{b} - \log c = 4^a$

→ Linear Algebra is the study of Linear equations

### 1.3 System of equations as lines

System 1	System 2	System 3
$a + b = 10$ $a + 2b = 12$	$a + b = 10$ $2a + 2b = 20$	$a + b = 10$ $2a + 2b = 24$
Unique Solution	Infinite solutions	No solution
$a = 8$ $b = 2$	$a = 8, 7, 6, \dots$ $b = 2, 3, 4, \dots$	
Complete	Redundant	Contradictory
<i>Non-singular</i>	<i>Singular</i>	<i>Singular</i>
